

# for **Email Servers**

# **Key Features**

- Accurate Detection With multiple analysis tools for separating threats from legitimate email, SecurityGateway leverages the best proven antispam, antivirus, antiphishing, and antispoofing technologies to produce a 99% spam blocking rate and achieve nearly zero false-positive results.
- Data Leak Prevention In addition to inbound mail traffic filtering, SecurityGateway also filters outbound email. An easy-to-use interface allows policies to be created which detect and prevent the unauthorized transmission of sensitive information outside of your network.
- Powerful Filtering Engine For Email **Servers** - SecurityGateway's powerful filtering engine is based upon the industry standard Sieve mail filtering language. An administrator may extend its functionality by using their own Sieve scripts.
- Defense Layer Customization
  - A unique SecurityGateway control method that allows email administrators the flexibility to prioritize the order of operations a specific security rule will execute when analyzing incoming or outgoing email traffic.
- Comprehensive Reporting Identify email traffic patterns and potential problems with SecurityGateway's comprehensive reporting. All reports support point-and-click drill-down targeting allowing further analysis to be performed.

# **Layered Defenses and Flexible Configuration** Improve Server Performance and Security

SecurityGateway for Email Servers combines nearly two decades of email security expertise with proven security technologies to protect message traffic from malicious attacks, message tampering and email address identity theft. Using multiple security methods, SecurityGateway assures the accurate delivery of legitimate email while minimizing the potential of false positives.

SecurityGateway incorporates multiple AV engines and proactive Outbreak Protection technology combined with additional signature recognition and heuristic analysis to detect viruses, spam, phishing, spyware and other types of unwanted and harmful email.

Outbound data leak prevention, that uses the industry standard Sieve filter language, allows administrators the flexibility to manage the flow of outbound email to prevent the unauthorized sending of messages and attachments.

### Your personal Spam Quarantine Report

This email contains a list of messages which have been quarantined by SecurityGateway for Exchange/SMTP.

- To move an email to your Inbox, click the "Release" link.
   To move an email to your Inbox and add the sender to your whitelist, click the "Always Allow" link.
   To delete the email and add the sender to your blacklist, click the "Blacklist" link.
   To delete all of the emails in your quarantine, click the "Delete All Messages" link at the bottom of this report.

This report has been generated for the following email address: user02@ssllock.com (<u>loqin</u>)
You have 13 message(s) in your quarantine folder.
Messages older than 90 days will automatically be removed.

User Control: A quarantine log email sent to users allows the release of messages or whitelisting of email without the need to burden the IT Administrator.

# **Key Benefits**

### • Easy Administration.

Intuitive, task oriented interface allows already overworked administrators to perform common actions with minimal effort. Administrative responsibilities can be delegated to a domain administrator. End users are empowered to determine the fate of a message without the need to contact the administrator.

## • Proven Threat Detection.

Multiple security tests, including multiple antivirus plug-ins, deliver enterprise-class protection against hidden threats, incoming and outgoing.

- On-Premise or Hosted Deployment.
   Per user options available for both
   commercial hosting and on-premise
   subscriptions available.
- Investment Protection.

Receive free upgrades to the latest product versions for the duration of the subscription term.

# **System Requirements**

- Microsoft Windows XP/2003/ Vista/2008/7/2012/8/10 (including 64-bit versions) (Windows server operating system recommended)
- CPU 800MHz or higher (dual core CPU 2.4GHz or higher recommended)
- 512 MB RAM (2 GB recommended)
- Network Interface Card
- TCP/IP network protocol installed
- NTFS volume with minimum of 500MB free space
- Edge 1.0, Internet Explorer 6.0, FireFox 1.5, Opera 8.5, Safari 3.0 (or later)
- Flash Player 8.0 or above for graphical reports

# **SecurityGateway Configuration and Features**

### **Security Options**

### AntiSpam

- Heuristic and Bayesian
- DNS Blacklists
- URI Blacklists
- Greylisting
- Message Certification
- Backscatter Protection
- Message Scoring
- Outbreak Protection via real-time pattern analysis

#### **AntiVirus**

- Automatic Pattern Updates
- Multiple AV engines

### Anti-Spoofing

- Reerse Lookups
- DKIM Signing and Verification
- SPF
- SenderID
- Call Back Verify

### **AntiAbuse**

- Relay Control
- SMTP Authentication
- IP Shielding
- Dynamic Screening
- Tarpitting
- Bandwidth Throttling

#### **Filtering**

- Message Content Filter
- Preset File Types

#### **Blacklists**

- Addresses
- Hosts
- IPs
- Blacklist Actions

#### Whitelists

- Addresses
- Hosts
- IPs

### **Policy Enforcement**

Sieve Rules

# **Configuration Options**

### **Domains and Users**

- Automatic Domain and User Creation/Maintenance
- Multiple Email Domains
- Domain Administrators
- Per-User Options

## Mail Handling

- Multi-Domains Per Mail Server
- Custom Mail Delivery Options

### **Quarantine Options**

- Domain Level for Admins
- User-Level Access

### **Database Maintenance**

• Backup & Restore

## Logs

### **Message Logging**

- Global Message Logs
- Domain Message Logs
- Quarantined Messages

## **Historical Logs**

- Configurable Log Retention
- · Snapshot System Log
- Snapshot Inbound Log
- Snapshot Outbound Log
- Snapshot HTTP Log
